

# *Rail Style Paddock Fencing*

Effortless style

Every once in a while an exceptional product comes along that has it all.....

Superior **safety**  
With a **long carefree life**  
With unparalleled **style**  
**Colour** that stays  
And **electrification** built in  
Requiring little to **no maintenance**  
That is **simple to install**

*Simply the Best....*

# *Superior Safety*

**Safety first is safety always**

Insist on superior safety....  
A rail with no sharp points that does not splinter, is soft but lies flat....  
Meticulously designed to protect your horses

# Long Carefree Life

Designed to withstand harsh weather conditions (freezing and hot temperatures). This fence rail is UV stabilised.... Lifespan in Europe is at least 20 years... in the harsh UV environment of South Africa the lifespan is at least 10 years.

## Competitive Price

The capital cost of the fence rail is competitive when compared with wooden fence and rail.... The total cost of ownership of the Safety4Horses rail is significantly less expensive than most alternatives as it has **NO annual upkeep costs**.... For example wooden rails require constant attention (painting, repairs, replacing rails).

*Lourensford Stud*

*Somerset West*

# Effortless Style

“Style is a way to say who you are without having to speak.” - Rachel Zoe

***“This is by far the best horse fencing I have ever seen or used... It is very safe, it looks stunning, it is very easy to install it is very durable and it is maintenance free”***

**Nicky Whitfield - Lavender Hill Stud**

Sit back and enjoy your Safety4Horses paddocks... They simply stay immaculate with little or no effort for many many years....

Permanently Stylish... make everything around you beautiful

**Nicky Whitfield** Brilliant fencing. I would not consider using anything else.  
Just the best 🥰

# Colour Design

The colour you choose isn't just a colour - it is an ATTITUDE.....

Manufactured into the rail, the colour is permanent and requires no maintenance... popular colours are white, brown and green....

Discuss the options to personalise your colour....

# Electrification

We lead the world with our patented design

From time to time a bucket of water and a cloth is all that is required to keep the rail immaculate.....

Tension the fence with a standard 24mm spanner as required

## Easy Care

Electrification is an integral part of the product... simply link the fence to a power source.... An added advantage of electrification is it stops horses crib biting or rubbing the fence.

# Simple Installation

Install poles (corner posts need to be concreted), install brackets using builders line (for position), feed rail through, tighten screws in fixed end bracket, tighten in ratchet..... Installation done !!

*Maine Chance Farms—Robertson*

The Safety4Horses fence rail kit consists of flexible fence rail, the tensioning ratchet assembly, fence post insulating brackets and the fixed end bracket.....
